THIS IS NOT A
SESSION TO
DISCUSS YOUR
PERFECT TOOL

HOW AND WHERE WE CAN OR SHOULD USE LOGIC APPS

LOGIC APPS EXPERIENCE

What tools should you use to build Logic Apps: Azure Portal, Visual Studio, or Visual Studio Code

INTEGRATIONS CHALLENGES

Cloud Integration, Hybrid integration and On-premises Integration
What are my options? What tools and technologies can we use?

INTEGRATIONS CHALLENGES

ON-PREMISES INTEGRATION

What are my options? Can we use Logic Apps?

HYBRID INTEGRATION

What are my options? What tools and technologies can we use?

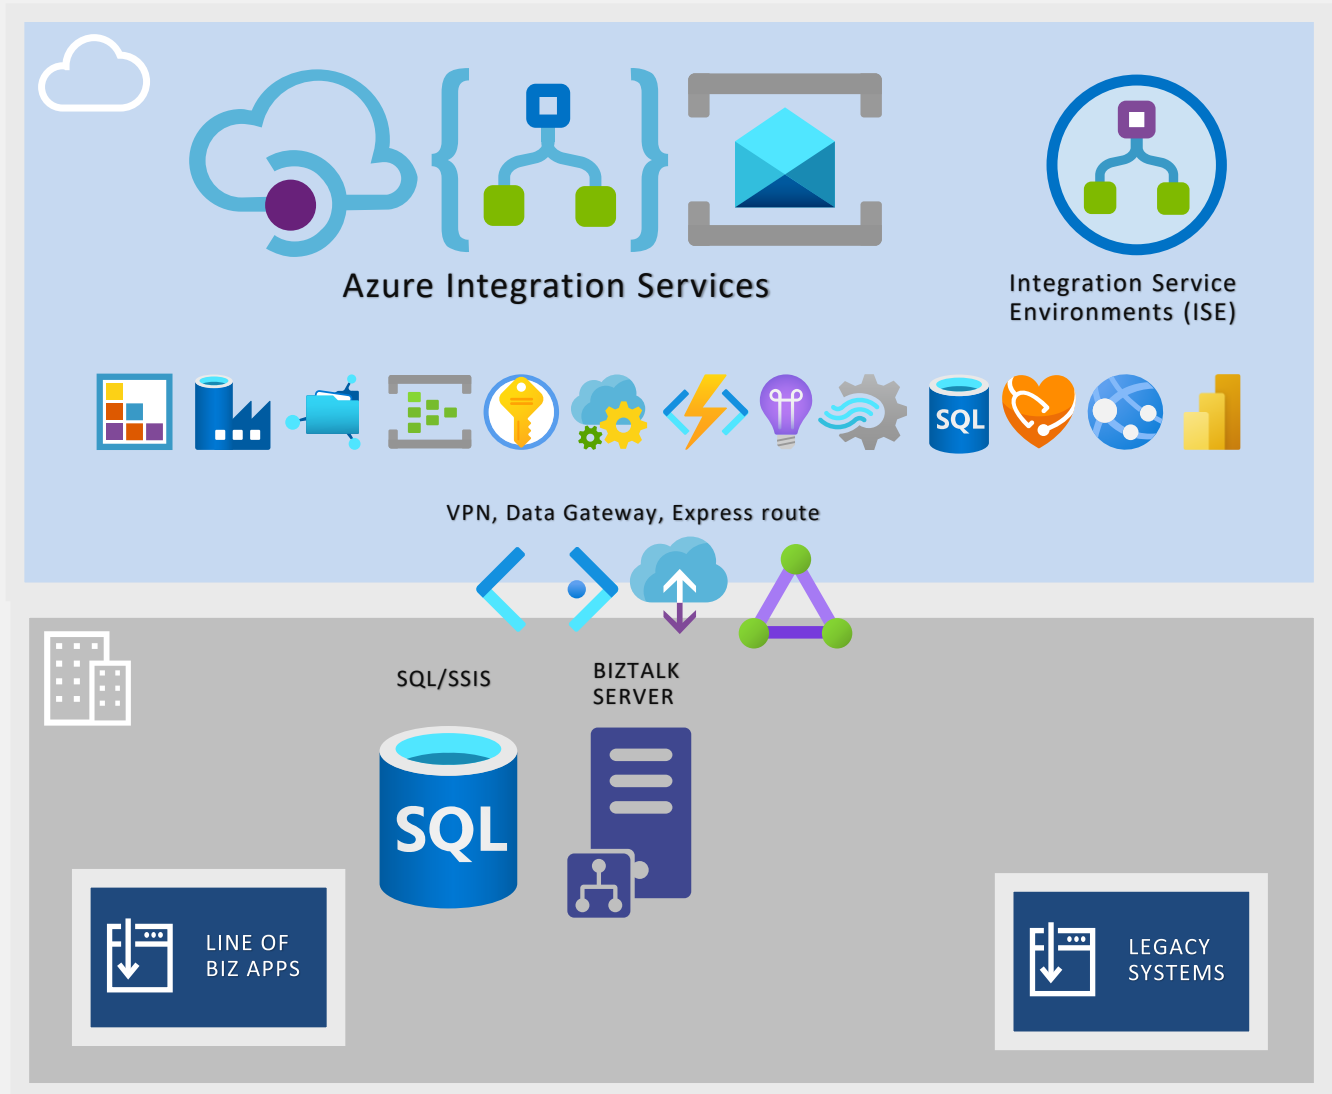

CLOUD INTEGRATION

Should we always use Logic Apps?
What are my other options?

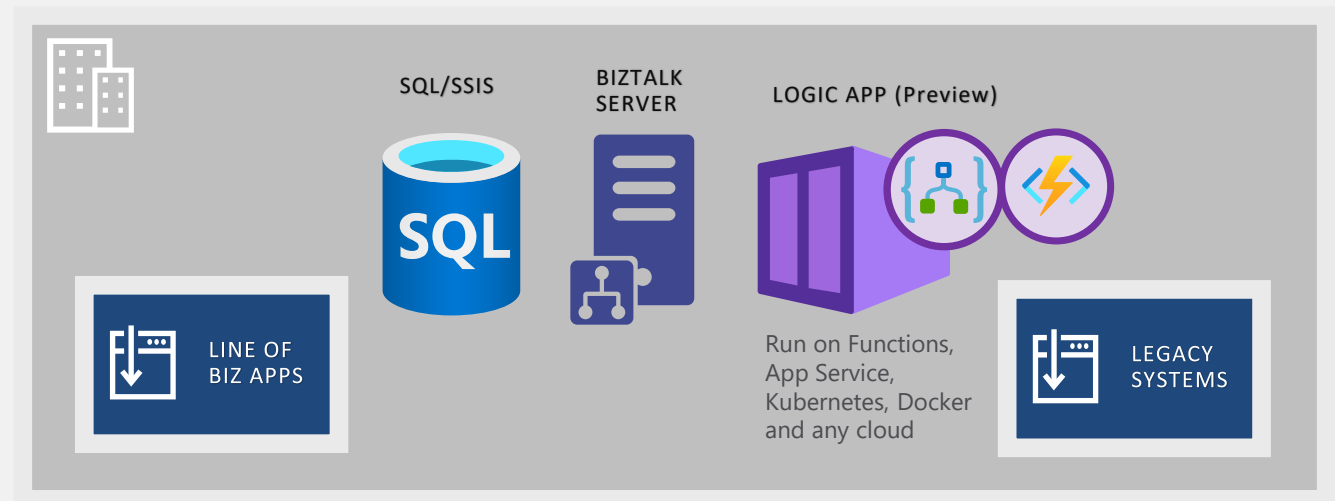

ON-PREMISES INTEGRATION

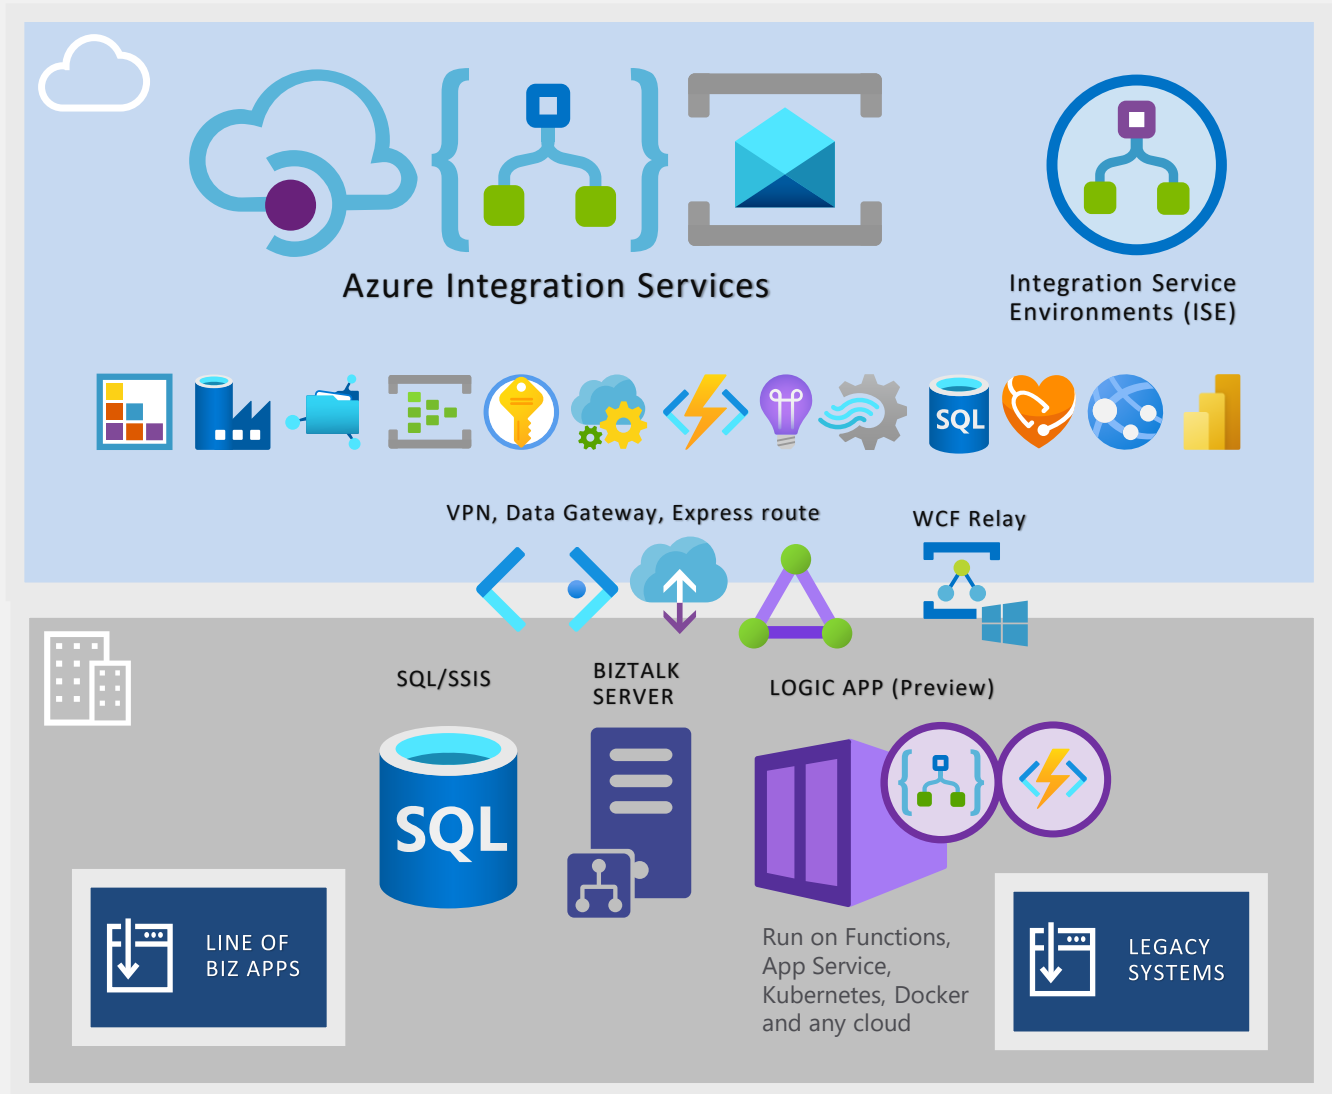

ON-PREMISES INTEGRATION

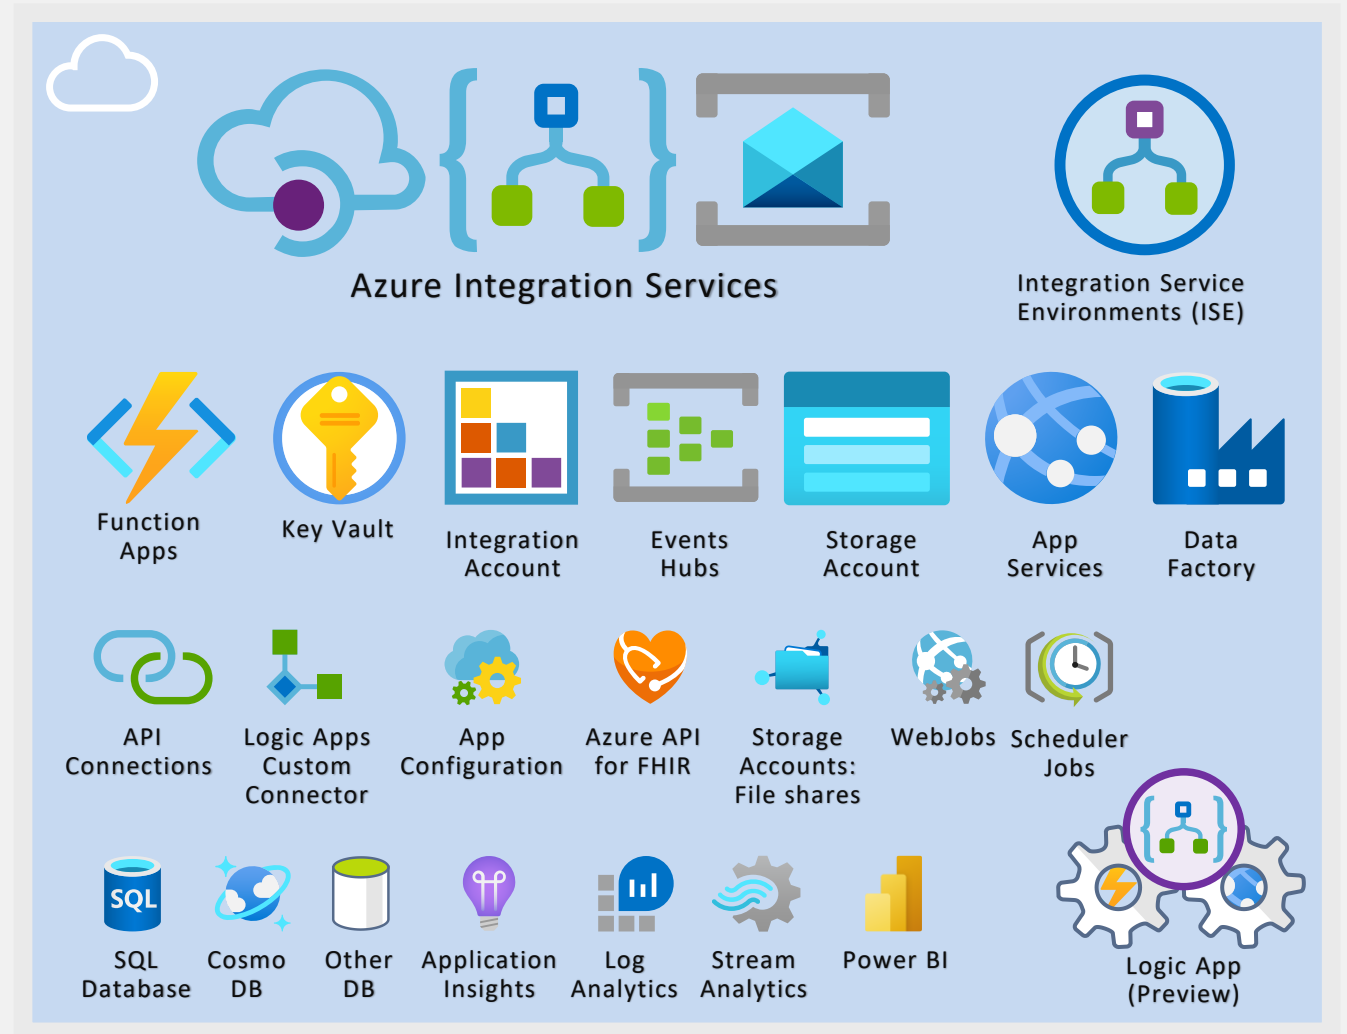

HYBRID INTEGRATION

CLOUD INTEGRATION

Hybrid Integration using **BizTalk Server** and **Logic Apps**

LOGIC APPS DEVELOPER OPTIONS

What do you need to know to start developing on Azure Logic Apps and in a productive and effective way.

AZURE PORTAL

Simple and quick approach

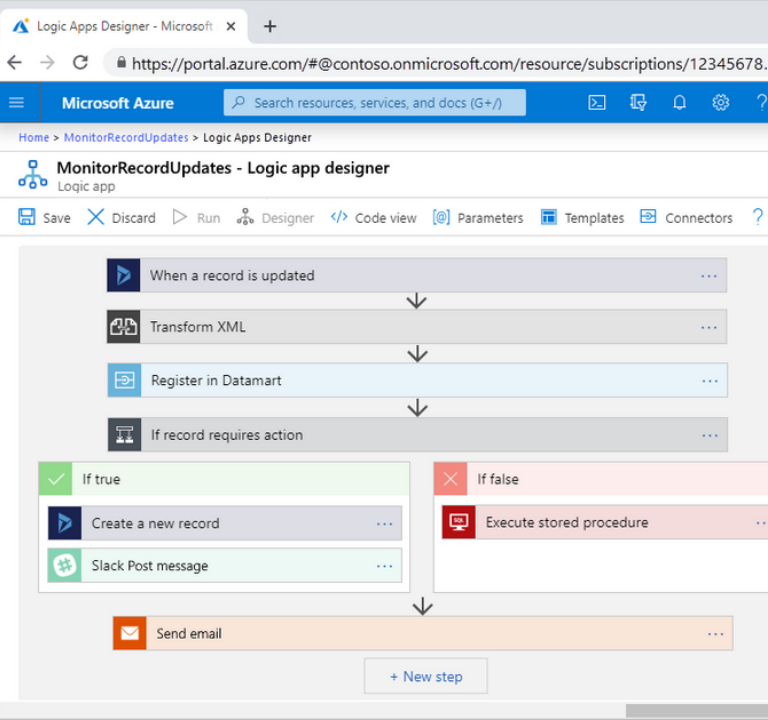

VISUAL STUDIO

Familiar tool for developers.

VISUAL STUDIO CODE

Lightweight and free tool

PERFORMANCE

- There are fewer bugs – compare to the other two options;
- **The browser reacts faster than the IE embedded in Visual Studio**

SIMPLE AND QUICK APPROACH

- It is quite intuitive and fast
- It doesn't require any additional tools or software
- It doesn't require a Visual Studio License
- And almost beginner tutorials or documentation use this approach
- it doesn't require any additional skill
- All types of users are familiar with

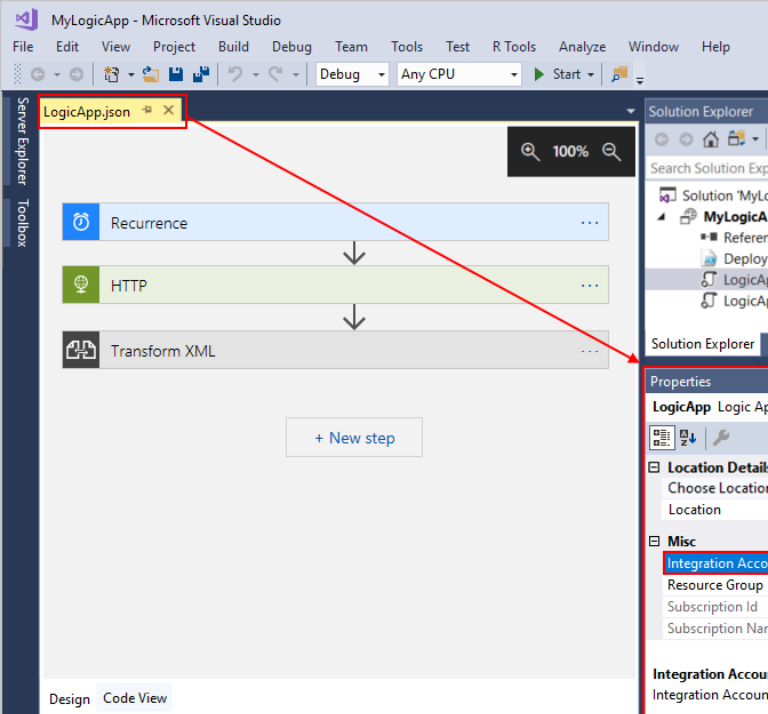

AZURE PORTAL

FASTER UPDATES

- This is the first place where updates will be made

BUT...

- Lack of CI/CD
- Hard to implement a proper naming convention
- Lack of proper Source code repository
- Harder to customize/parameterize your Logic App
- All types of users are familiar with Azure Portal and create Logic Apps

FULL CI/CD SUPPORT.

- We can easily customize almost everything, and we can easily use Azure Pipelines in Azure DevOps to easily deploy across environments or different resources
- We can easily customize/parameterize our Logic App template, parameters, and variables;
- All the connection settings will be automatically rectified in an upsert matter (create the resource if it doesn't exist or update if already exist)

VISUAL STUDIO

PROPER NAMING CONVENTIONS

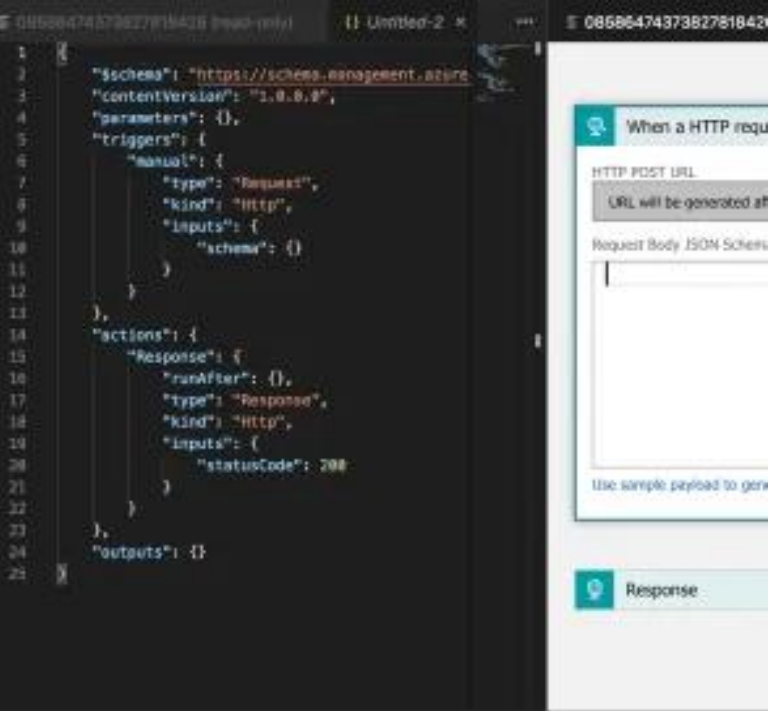

- We can easily change the default connector names to have a proper naming convention

FAMILIAR TOOL FOR DEVELOPERS & SOURCE CODE REPOSITORY

- It is a well know tool for developers
- Visual Studio versioning and the full development life cycle inside TFS or Git

BUT...

- Visual Studio License
- There are some well-known bugs
- Great amount of manual configurations
- A tool focused on developers
- Performance
- No support for Logic Apps (Preview)

CI/CD SUPPORT.

- We can easily customize almost everything, and we can easily use Azure Pipelines in Azure DevOps to easily deploy across environments or different resources
- We can easily customize/parameterize our Logic App template, parameters, and variables;
- All the connection settings will be automatically rectified in an upsert matter (create the resource if it doesn't exist or update if already exist)

VISUAL STUDIO CODE

FOR LOGIC APPS
(SERVELESS)

PROPER NAMING CONVENTIONS

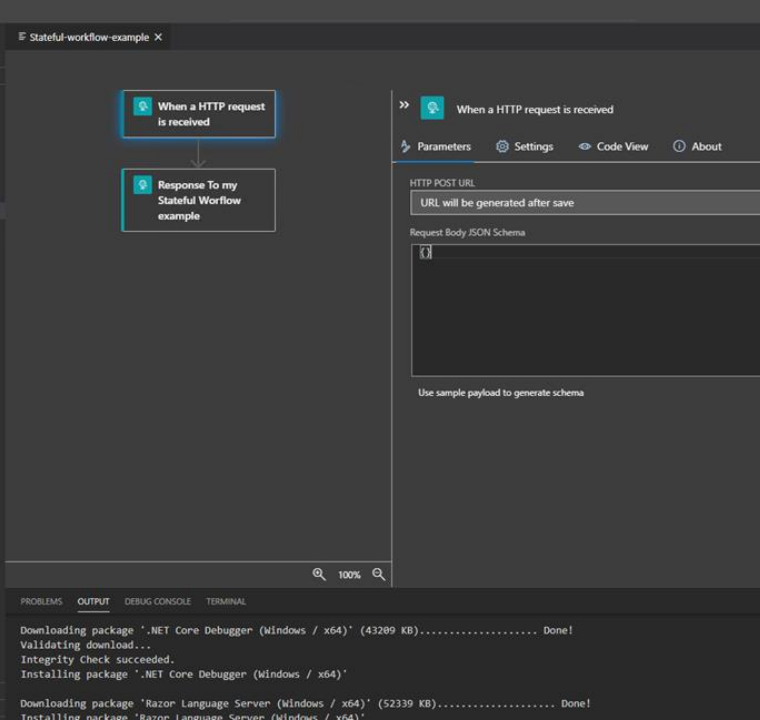

- We can easily change the default connector names to have a proper naming convention

FREE OPEN- SOURCE TOOL

- It is a free open-source tool, which means that you don't require any licensing;

BUT...

- Logic App Designer is view mode only
- Everything needs to be done manually
- No local project support

FULL LOGIC APP
DESIGNER

NEW LOGIC APPS
DESIGNER

STATEFUL OR
STATELESS
WORKFLOWS

VISUAL
STUDIO
CODE

FOR LOGIC APPS (PREVIEW)
(COMPUTED BASE)

RUN LOCAL

RUN
EVERYWHERE

LOCAL PROJECT
SUPPORT

BREAKPOINT
DEBUGGING

BUT...

- Preview (not ready to production)
- Some limitations
- Logic Apps (Preview): No support to Visual Studio
- Can't deploy single Logic App
